$$Ta_k = \frac{2 \sin(\omega T_1)}{\omega}$$

$$\omega = k\omega_0 = k \frac{2\pi}{T}$$

$$\omega_0 = \frac{2\pi}{T}$$

$$T = 4T_1$$

$$\omega_0 = \frac{2\pi}{4T_1} = \frac{\pi}{2T_1}$$

$$T = 8T_1$$

Ta_k

$$\omega_0 = \frac{2\pi}{8T_1} = \frac{\pi}{4T_1}$$

$$T = 16T_1$$

Ta_k

$$\omega_0 = \frac{2\pi}{16T_1} = \frac{\pi}{8T_1}$$

Representation of Aperiodic Signals: CT Fourier Transform

$$\omega = k\omega_0 = k\frac{2\pi}{T}$$

$$T \rightarrow \infty \Rightarrow \{Ta_k\} \rightarrow \left. \frac{2 \sin(\omega T_1)}{\omega} \right|_{\omega = k\omega_0}$$

an aperiodic signal

a periodic signal

$$\tilde{x}(t) = \sum_{k=-\infty}^{+\infty} a_k e^{jk\omega_0 t}$$

$$a_k = \frac{1}{T} \int_{-T/2}^{T/2} \tilde{x}(t) e^{-jk\omega_0 t} dt$$

$$\Rightarrow a_k = \frac{1}{T} \int_{-T/2}^{T/2} x(t) e^{-jk\omega_0 t} dt = \frac{1}{T} \int_{-\infty}^{+\infty} x(t) e^{-jk\omega_0 t} dt$$

- Define the envelope $X(j\omega)$ of Ta_k as

$$Ta_k = \frac{2 \sin(\omega T_1)}{\omega}$$

$$X(j\omega) = \int_{-\infty}^{+\infty} x(t) e^{-j\omega t} dt$$

- Then,

$$a_k = \frac{1}{T} X(jk\omega_0)$$

- Hence,

$$\tilde{x}(t) = \sum_{k=-\infty}^{+\infty} \frac{1}{T} X(jk\omega_0) e^{jk\omega_0 t}$$

$$\omega_0 = \frac{2\pi}{T}$$

$$\frac{1}{T} = \frac{1}{2\pi} \omega_0$$

$$= \frac{1}{2\pi} \sum_{k=-\infty}^{+\infty} X(jk\omega_0) e^{jk\omega_0 t} \omega_0$$

- As $T \rightarrow \infty$, $\tilde{x}(t) \rightarrow x(t)$

also $\omega_0 \rightarrow 0$

$$x(t) = \frac{1}{2\pi} \int_{-\infty}^{+\infty} X(j\omega) e^{j\omega t} d\omega$$

- inverse Fourier transform eqn

- synthesis eqn

$$X(j\omega) = \int_{-\infty}^{+\infty} x(t) e^{-j\omega t} dt$$

- $X(j\omega)$: Fourier Transform of $x(t)$
spectrum

- analysis eqn

$$a_k = \frac{1}{T} X(j\omega) \Big|_{\omega = k\omega_0}$$

■ Sufficient conditions for the convergence of FT

$$x(t) \xrightarrow{CT\mathcal{FT}} X(j\omega)$$

$$X(j\omega) = \int_{-\infty}^{+\infty} x(t) e^{-j\omega t} dt$$

$$\hat{x}(t) \xleftarrow{CT\mathcal{IFT}} X(j\omega)$$

$$\hat{x}(t) = \frac{1}{2\pi} \int_{-\infty}^{+\infty} X(j\omega) e^{j\omega t} d\omega$$

$$e(t) = \hat{x}(t) - x(t)$$

- If $x(t)$ has finite energy

i.e., square integrable, $\int_{-\infty}^{+\infty} |x(t)|^2 dt < \infty$

$$\Rightarrow X(j\omega) \text{ is finite}$$

$$\Rightarrow \int_{-\infty}^{+\infty} |e(t)|^2 dt = 0$$

▪ Sufficient conditions for the convergence of FT

- Dirichlet conditions:

1. $x(t)$ be absolutely integrable; that is, $\int_{-\infty}^{+\infty} |x(t)| dt < \infty$

2. $x(t)$ have a finite number of maxima and minima within any finite interval

3. $x(t)$ have a finite number of discontinuities within any finite interval

Furthermore, each of these discontinuities must be finite

■ Example 4.1:

$$x(t) = e^{-at} u(t), \quad a > 0$$

$$x(t) = \frac{1}{2\pi} \int_{-\infty}^{+\infty} X(j\omega) e^{j\omega t} d\omega$$

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$$\Rightarrow X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$$= \int_{-\infty}^{\infty} e^{-at} u(t) e^{-j\omega t} dt$$

$$= \int_0^{\infty} e^{-at} e^{-j\omega t} dt$$

$$= \int_0^{\infty} e^{-(a+j\omega)t} dt$$

$$= -\frac{1}{a + j\omega} e^{-(a+j\omega)t} \Big|_0^{\infty}$$

$$= 0 - \left(-\frac{1}{a + j\omega} e^{-(a+j\omega)0} \right)$$

$$= \frac{1}{a + j\omega}, \quad a > 0$$

■ Example 4.1:

$$\Rightarrow X(j\omega) = \frac{1}{a + j\omega}, \quad a > 0$$

$$\Rightarrow |X(j\omega)| = \frac{1}{\sqrt{a^2 + \omega^2}}$$

$$\Rightarrow \angle X(j\omega) = -\tan^{-1} \left(\frac{\omega}{a} \right)$$

■ Example 4.2:

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$$x(t) = e^{-a|t|}, \quad a > 0$$

$$\Rightarrow X(j\omega) = \int_{-\infty}^{\infty} e^{-a|t|} e^{-j\omega t} dt$$

$$= \int_{-\infty}^0 e^{at} e^{-j\omega t} dt + \int_0^{\infty} e^{-at} e^{-j\omega t} dt$$

$$= \frac{1}{a - j\omega} + \frac{1}{a + j\omega}$$

$$= \frac{2a}{a^2 + \omega^2}$$

■ Example 4.3:

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$x(t) = \delta(t)$, i.e., unit impulses

$$\Rightarrow X(j\omega) = \int_{-\infty}^{\infty} \delta(t) e^{-j\omega t} dt = 1$$

■ Example 4.4:

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$$x(t) = \begin{cases} 1, & |t| < T_1 \\ 0, & |t| > T_1 \end{cases}$$

$$\Rightarrow X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt = \int_{-T_1}^{T_1} e^{-j\omega t} dt$$

$$= \frac{1}{-j\omega} e^{-j\omega t} \Big|_{-T_1}^{T_1}$$

$$= \frac{1}{-j\omega} \left(e^{-j\omega T_1} - e^{j\omega T_1} \right)$$

$$= \frac{1}{j\omega} \left(e^{j\omega T_1} - e^{-j\omega T_1} \right)$$

$$= 2 \frac{\sin(\omega T_1)}{\omega} = 2T_1 \frac{\sin(\pi \omega T_1 / \pi)}{\pi \omega T_1 / \pi}$$

■ Example 4.5:

$$X(j\omega) = \begin{cases} 1, & |\omega| < W \\ 0, & |\omega| > W \end{cases}$$

$$x(t) = \frac{1}{2\pi} \int_{-\infty}^{+\infty} X(j\omega) e^{j\omega t} d\omega$$

$$X(j\omega) = \int_{-\infty}^{\infty} x(t) e^{-j\omega t} dt$$

$$\Rightarrow x(t) = \frac{1}{2\pi} \int_{-W}^W e^{j\omega t} d\omega$$

$$= \frac{\sin(Wt)}{\pi t}$$

■ sinc functions:

$$\text{sinc}(\theta) = \frac{\sin(\pi\theta)}{\pi\theta}$$

$$\frac{\sin(Wt)}{\pi t} = \frac{W}{\pi} \text{sinc}\left(\frac{Wt}{\pi}\right)$$

$$(jw)Y(jw) + aY(jw) = X(jw)$$

$$\Rightarrow h(t) = e^{-at}u(t)$$

$$\frac{d^2y(t)}{dt^2} + 4\frac{dy(t)}{dt} + 3y(t) = \frac{dx(t)}{dt} + 2x(t)$$

$$\Rightarrow H(jw) = \frac{(jw) + 2}{(jw)^2 + 4(jw) + 3} = \frac{(jw + 2)}{(jw + 1)(jw + 3)}$$

$$= \frac{1/2}{jw + 1} + \frac{1/2}{jw + 3}$$

$$\Rightarrow h(t) = \frac{1}{2}e^{-t}u(t) + \frac{1}{2}e^{-3t}u(t)$$

■ Example 4.26:

$$H(j\omega) = \frac{(j\omega + 2)}{(j\omega + 1)(j\omega + 3)}$$

$$\Rightarrow Y(j\omega) = X(j\omega)H(j\omega)$$

$$= \left[\frac{1}{j\omega + 1} \right] \left[\frac{j\omega + 2}{(j\omega + 1)(j\omega + 3)} \right]$$

$$= \frac{j\omega + 2}{(j\omega + 1)^2(j\omega + 3)}$$

$$= \frac{\frac{1}{4}}{j\omega + 1} + \frac{\frac{1}{2}}{(j\omega + 1)^2} - \frac{\frac{1}{4}}{j\omega + 3}$$

$$\Rightarrow y(t) = \left[\frac{1}{4} e^{-t} + \frac{1}{2} t e^{-t} - \frac{1}{4} e^{-3t} \right] u(t)$$
